

SCRAP HANDLING GRAPPLE BUCKETS

OVERVIEW

Dymax Scrap Handling Grapple Buckets feature two piece, independent top clamps with solid steel tine construction. Each grapple bucket is powered by two large cylinders which firmly grip and hold awkward, hard-to-load materials. Grapple arms retract behind the leading cutting edge for loading against objects such as concrete walls or large piles of rubble.

The design of the **Dymax Scrap Handling Grapple Bucket** ensures that the top clamp opening is wide enough to allow conventional loading of the bucket when necessary. The flat floor enables the operator to utilize the bucket in a "skimming" mode. Grapples feature retractable stops. All models are provided with a grapple control valve package providing a cushioning effect during operation in both directions.

Clamps

Independent acting clamps feature solid steel tine construction.

Cutting Edge

Standard replaceable heat treated bolt-on cutting edges; optional rubber cutting edges or can be equipped with replaceable teeth and segments.

Sides Plates

Available with open sides, bolt-on side plates or conventional bucket sides.

Skeleton Floor Design

This skeletal floor design provides sifting ability in order to leave mud, grass and earth materials behind.

Bolt-On Side Plates

Add or remove your side plates depending on the materials you're working with.

Customized. No problem!

This custom model features replaceable side wear edges, teeth, edge segments and a larger radius clamp for landfill operations.
