

## SKELETON ROCK BUCKETS

### SIFT OUT UNWANTED MATERIALS

**Dymax Skeleton Rock Buckets** feature strategically spaced steel ribs that allow the bucket to retain larger rocks while sifting out smaller materials.

Made from high-strength, abrasion-resistant steel, these buckets are available in a variety of capacities, making them ideal for heavy-duty rock handling in quarries, dam sites, stockpile applications and construction environments that require removing rocks or debris without displacing soil.

### KEY FEATURES

- For wheel loaders, backhoe loaders and excavators.
- High strength, abrasion-resistant T-1 steel (100,000 lb yield) construction.
- Available in a variety of sizes, from 1.00 to 7.00 cyd capacity, and can be matched to the job and machine.
- Standard rib spacing from 4-12 inches. Dymax engineers can design custom buckets featuring wider or narrower spaces between the ribs as required.
- Equipped with replaceable, heavy-duty bolt-on teeth. Lip shrouds and side cutters are also available.
- Dual grapples available on some models.
